Q3 HSEQ CAMPAIGN

DROPPED OBJECT PREVENTION

SAFE POSITION & GEAR – TO KEEP YOU CLEAR

Identify, control and avoid any dropped objects and line of fire hazards to keep yourself and others safe! Exposed to stored energy, or standing in ***line of fire*** (Life Saving Rule), i.e. exposed to an object falling from a height, or a wire parting during tension and snapping back – can be catastrophic.

Safety procedures and barriers are there for a reason – your input, awareness and compliance are key to keeping both you and your colleagues safe. Focus on potential dropped objects during SJA & TBT.

- Housekeeping is the first step to good safety: Secure tools and equipment
- Focus on sea fastening
- Check for potential dropped objects in your work area
- Conduct potential dropped object sweep prior to lifting
- Use and respect barriers and remove barriers when work is completed
- Minimise/control work on different heights in same area
- Keep yourself and others out of line of fire
