

## SAFETY FIRST

# Stop & think before lifting

Manual handling causes 1 in 3 workplace injuries and can lead to lifelong chronic pain. Before you grab it, remember: **It's never "just a quick lift."** Stop and think before you lift.

## STOP

- Do I need to lift this at all?
- Is it safe to handle manually?
- Can I use a trolley, hoist or crane?

## OFFSHORE RISKS

- Vessel movement - Wait if unsafe
- Slippery decks - Check footing
- Cold conditions - Ensure good grip
- Awkward loads - Reassess before lift

## THINK

- Is the load too heavy or awkward?
- Can I team lift?
- Is my path clear stable and dry?

## THE GOLDEN RULES

- MAX LIMIT: 20 KG
- NO LIFT IS ROUTINE
- IF IN DOUBT - STOP
- ALWAYS ASK FOR HELP

## LIFT SAFE

- Keep the load close to your body.
- Bend your knees, not your back.
- Smooth movements - no twisting.

Still think it's just a quick lift?

**STOP – THINK – LIFT SAFE**
