

MAINTAIN AND CONTAIN – PREVENT SPILLS FROM OUR OPERATIONS

We care about the environment in which we work and how our operation affects marine life- we are aiming for ZERO spills, which can only be achieved by joint effort. The nature of our business is challenging in many ways which makes it even more important to work preventative, such as bringing sufficient spare parts, conduct inspections and ensure our equipment is maintained and set up correctly.

The reported spills for 2021 are mainly related to hydraulic oil. This is mainly due to damage to ROV hydraulic hoses / joints, sampling equipment motor leakage and insufficient maintenance / design of hydraulic hose on deck equipment.

Preventative work

-  Maintenance / Inspections/
Hydraulic Hose Management
-  Risk Assessment / Toolbox Talk
-  Training / Drills
-  Use of Bio-degradable oil
-  MSDS available and adhered to

Response to minimize damage

-  Use of spill response kits /
containments
-  Incident reporting, follow up actions &
Lessons learned
