

PREVENTION OF EYE INJURIES

LOOK AFTER YOUR EYES – PREVENT A LIFE IN THE DARK

As seen in the trends and statistics for 2022 we experience and increased trend of eye injuries, both during tasks and after task completion. These injuries could have been prevented or less severe if safety goggles have been worn.

Injuries occurs not only when performing the work but can occur after work has been completed as well, when you leave your eyes exposed, such as when taking off your workwear, taking a shower after dirty work, or when storing away equipment or chemicals job completion.

HOW TO PREVENT EYE INJURIES

- ✦ Use tightly fitted goggles rather than safety glasses when performing work that involves exposure to smaller debris, such as grinding or deck cleaning works
- ✦ Brush down your clothes and PPE after being exposed to debris, dust or any other material or substance that could potentially enter and harm your eyes
- ✦ Always wear correct eye protection when using / being exposed to chemicals
